(vscode, 2022) Visual Studio Code is a lightweight yet capable source code editor that runs on your desktop for Windows, macOS, and Linux. It comes with built-in JavaScript, TypeScript, and Node.js support, as well as a powerful ecosystem of extensions for other languages and runtimes (including C++, C#, Java, Python, PHP, Go, and .NET).

2. Postman

(postman, 2022) Postman is a popular tool used for testing APIs (Application Programming Interfaces). It allows developers to easily make HTTP requests to web servers and receive responses back.

With Postman, developers can create, test, and document APIs. It provides a user-friendly interface for creating requests and inspecting responses, making it easier to understand the API's behavior and troubleshoot any issues. In addition, Postman offers a range of features such as automated testing, collaboration, and API monitoring, making it a comprehensive tool for API development and testing.
